Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This application claims priority to provisional application Serial No. 60/173,959.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, 41, 60, 69, and 70 drawn to methods of increasing the reproductive performance of female swine, classified in class 514, subclass 558 for example.
- II. Claims 19-20, 25, 61-62, and 67 drawn to methods of increasing the number of live births to a female swine, classified in class 514, subclass 558 for example.
- III. Claims 21-22, 24, 63-64, and 66 drawn to methods of decreasing the interval from weaning to estrus for a female swine, classified in class 514, subclass 558 for example.
- IV. Claims 26-40 and 68 drawn to methods of increasing the fertility of a male swine, classified in class 514, subclass 558 for example.
- V. Claims 42-59 drawn to swine feed compositions herein, classified in class 514, subclass 558 for example.

Inventions Group I-IV are unrelated to each other. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions are separate and distinct each from the other because they have different functions. The invention of Group I functions to

Art Unit: 1617

increase the reproductive performance of female swine. The invention of Group II functions to increase the number of live births to a female swine. The invention of Group III functions to decrease the interval from weaning to estrus for a female swine. The invention of Group IV functions to increase the fertility of a male swine. Therefore, Group I-IV have different functions.

Inventions Group V; and I-IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case other actives such as clomiphene may be used in a method of increasing the fertility of a male swine.

Each above product and method of treatment relates to a separate and distinct area of pharmaceutical technology. The search for all inventions would place an undue burden on the Office in view of the diversity of the medical disorders to be treated and the corresponding diversity in the field of search for each.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because the above restriction/election requirement is complex, a telephone call to applicant's agent to request an oral election was not made. See M.P.E.P Sec.

812.01.
